Senior software engineer with 8+ years building web and mobile applications

Engineering is a team sport. I lead without ego, mentor without gatekeeping, and I get more satisfaction watching a junior engineer nail something independently than I do shipping something myself. For me, a great team is the product.

EXPERIENCE

Senior Frontend Developer, Tactacam LLC (2022 - 2026)

- Led a team of 5 engineers building FeatherSnap, growing the React Native and Typescript platform from early MVP through 50k MAU, defining architecture, state-management patterns, and delivery standards across mobile and web clients. Also led development for Defend Security Cameras.
- Owned onboarding for all new team members, and led a summer internship program that grew two engineers into mid-level, independent contributors through structured 1:1s, paired programming, and growth-oriented goal-setting.
- Partnered with design, product, and marketing to steer requirements and ran sprint planning, ticket grooming, and delivery tracking in Jira; hit nearly every committed deadline across the team's tenure and proactively kept stakeholders informed on scope and timing when dates needed to be shifted.
- Designed state architecture to handle complex multi-step workflows and high-frequency data updates, selecting React Query for server-state, Zustand for predictable re-renders and MMKV for performant on-device persistence.
- Built offline-first interactive game-play in React Native for firearm training and target practice using BLE-connected targets.
- Overhauled PR review process and templates across FeatherSnap and Defend, instituting structured review checklists and LLM-assisted code review that reduced review cycle time ~50% while raising baseline code quality.
- Owned CI/CD and release automation for iOS and Android apps, configuring pipeline triggers so every successfully merged PR produced a TestFlight build automatically, increasing release frequency ~3x and giving stakeholders always-current builds without ad-hoc requests.
- Contributed Node.js/TypeScript backend services on AWS Lambda, API Gateway, and DynamoDB using infrastructure-as-code (AWS CDK), reducing the frontend team's dependency on backend engineers for routine API work.

ADDITIONAL EXPERIENCE

Frontend Software Engineer, Society of Automotive Engineers (SAE) (2021)

- Built complex multi-step onboarding flows in Angular for DATC, a core growth product generating millions in annual revenue, optimizing a critical conversion funnel through conditional logic, dynamic validation, and multi-screen form state.
- Contributed an autocomplete component to a shared UI library used across 10+ applications, improving consistency and accelerating delivery across product teams.

Software Engineer I/DevOps Engineer, DDI (2019-2020)

- Built features with .NET (ASP.NET Core) REST APIs in C#, using decorator-driven controllers, dependency injection, and ORM-backed relational data access, consumed by React Native and Angular clients.
- Built interactive bar, line, and pie chart visualizations with D3.js to surface user statistics from relational data.
- Automated CI/CD workflows using Azure DevOps, reducing deployment overhead across the team.

Programmer/Analyst, Federated Investors (2017-2018)

- Delivered a proof-of-concept scheduling tool in 3 weeks within a regulated financial enterprise, securing executive approval to replace a legacy system with a full rebuild
- Diagnosed and resolved production data integrity issues across millions of records by writing and modifying SQL stored procedures, queries, and scheduled jobs against relational databases in a regulated financial environment

SKILLS & TECHNOLOGIES

- Languages: JavaScript, TypeScript, HTML, CSS, SQL
- Frontend Frameworks: React, React Native, Angular, Expo, Next.js, Tailwind, TanStack, GraphQL
- Cloud: AWS (CDK, API Gateway, Lambda, S3, SNS)
- DevOps: GitHub Actions, Azure DevOps, Expo EAS, CodeMagic, AWS Amplify, Netlify, Vercel
- Testing: Jest, React Testing Library, Appium, WebDriverIO, Cucumber
- Analytics: Google Analytics, Survicate
- Monitoring: Sentry

EDUCATION

Bachelor of Science, Computer Engineering — University of Pittsburgh

Minor: Industrial Engineering (process optimization, engineering management, human factors engineering)
